How to convert 220V DC to 330v AC?

For Which I Decided to Use a Rectifier to Every Source Converting 220V to 330VDC by Filtering it out using a Capacitor. And Combining all 4x 330V DC in Parallel to get a Common DC BUS Rail. Thereafter I Planned to Use a Transformerless Inverter Circuit as per Attached to Convert the 330V DC to 220V AC. For which i used IR2110 and 4x IRF840.

How many volts can a 220 volt diode give?

As your sources are power limited, voltage /current will drop with load. If the initial voltages are same, they will share current fairly equally. But 220VAC will give only 310VDC; add 1-2 volts of diode drop. You can safely get around 210VAC I presume. It is impossible to debug with the limited information.

How many volts can a 220 volt power supply give?

But 220VAC will give only 310VDC; add 1-2 volts of diode drop. You can safely get around 210VAC I presume. It is impossible to debug with the limited information. Does it work with one power source? (do not use 4 power sources in parallel in the first attempt)

What is the purpose of the inverter module?

MULTIPURPOSE: The inverter module can be used as a pure sine ,modified sine ,single silicon or four silicon pre stage inverter circuit. **PRACTICAL ACCESSORY:** The inverter board is suitable for DIY production,repair and replacement for electronic hobbyists,as well as for manufacturers" control cabinets.

Below you will find an overview of all DC/DC converters& #32;from 330V to 220V DC direct voltage. These converters are stabilized,& #32;short-circuit proof and can operate with 330V ...
