# Charging station energy storage power

What does the battery store at the charging station?

The power storage system at the Electric Vehicle Charging Station consists of three main units: Battery, Power Conversion System, and Software. Let's discuss them in detail: Battery: Since it stores power in the form of a direct current, it is simply the vehicle's electric storage system.

What is a charging station?

For other uses, see Charging Station. The Charging Station is a block added by Immersive Engineering. It is used to charge Redstone Flux (RF), and until version 0.8, Energy Units (EU), containers and tools. Energy (RF only) can be input through the bottom and back side of the block.

How do I transfer energy from a charging station to a stored item?

Right-clicking the Charging Station with an energy container in hand will put the container inside the Charging Station, and right-clicking it again will remove that container. While inside, the Charging Station will transfer its energy to the stored item, at a rate of 4000 RF/t.
