What is MPPT solar inverter?

Nowadays, almost all solar inverters are embedded with MPPT technology. An MPPT solar inverter performs two roles: The maximum power point tracker in the inverter converts high DC power into low DC power. The low DC power is converted into AC power that's used to run your household appliances.

Which Inverter should I buy if I don't use MPPT?

You have to use an inverter that doesn't use the MPPT algo at all. String inverters use Maximum power point tracking algorithms. So, you'll have to buy a different inverter. One option is to buy MLP inverters by SolarEdge. The second option is to buy M-phase micro inverters.

Where can I buy a hybrid inverter?

Thanks to our cooperation with Europe's leading distributors in the solar and photovoltaic trade, we at Solartraders can guarantee permanently low prices. In our range you will find hybrid inverters from all leading manufacturers in the industry, such as Huawei, SMA or Fronius.

What is a hybrid inverter?

Hybrid inverters combine several functions in one device: they convert direct current (DC) from PV modules into alternating current (AC) for domestic use, control the charging and discharging of batteries and optimize the energy flow in the system. A particular advantage of the technology is the so-called "peak shaving" function.

A hybrid inverter combines the functions of an inverter and a battery storage system in one device. It converts the direct current from photovoltaic systems into usable alternating current
