What is the difference between a fuses and a circuit breaker?

Although they serve the same purpose of protecting electrical appliances and circuits from short circuits and excessive current,fuses and circuit breakers operate differently. Fuses are relatively low cost electrical safety devices.

What happens when a circuit breaker blows a fuse?

When a fuse blows in a circuit,it must be replaced before the device or appliance can be used again. Circuit breakers work in a similar way,but they are resettable. When a fault is detected (typically a short circuit or an excessive amount of current flowing through the circuit),the circuit breaker interrupts the flow of current.
