Siculibacillus lacustris is a species of α -proteobacteria in the family *Ancalomicrobiaceae*.

Assigned by: Felfoldi T, Marton Z, Szabo A, Mentes A, Boka K, Marialigeti K, Mathe I, Koncz M, Schumann P, Toth E. *Siculibacillus lacustris* gen. nov., sp. nov., a new rosette-forming ...

The range of data encompasses taxonomy, morphology, physiology, sampling and concomitant environmental conditions as well as molecular biology.

The two strains had identical 16S rRNA gene sequences and were most closely related to *Pinisolibacter ravus* E9 T (97.36 %) and *Siculibacillus lacustris* SA-279 T (96.33 %). ...

Scientific Name *Siculibacillus lacustris* Common Name - Taxonomy ID 1549641 Lineage cellular organisms; Bacteria; Pseudomonadota; Alphaproteobacteria; Hyphomicrobiales; ...

THE NCBI Taxonomy database allows browsing of the taxonomy tree, which contains a classification of organisms.

A new aerobic alphaproteobacterium, strain SA-279T, was isolated from a water sample of a crater lake. The 16S rRNA gene sequence analysis revealed that strain SA-279T formed a ...
