
Cooling system of wind turbine

Extreme heat, drought and other climate hazards could raise cumulative annual running costs at data centres in operation today by \$3.3 trillion by 2055.

India's cooling challenge India faces a daunting problem: how to provide access to cooling to its citizens without warming the planet. India has among the most cooling degree ...

Data centres are responsible for 1% of energy-related greenhouse gas emissions. Here's how to cut those emissions and still deliver on the promise of AI.

A key reason for the high-water consumption is limited water reuse in cooling. During the cooling process, part of the freshwater evaporates, and the remaining water ...

Data centres cause accelerating water usage, requiring innovative water circularity solutions; however, collaboration will be critical for their success.

The partners are testing the effectiveness of passive cooling measures, like insulation, shading and roof design. Ultimately, the project aims to integrate the most ...
