# Does an inverter still need to be used when converting a motorhome to 24v electricity

Do you need an inverter for a camper?

Most people who use campsites regularly probably don't need to bother about fitting an inverter in their motorhome or camper. After all, the idea of it is to change 12v power from the leisure battery into 230v power which can be used to power appliances like laptops and hairdryers.

What is a motorhome inverter?

To an adult then. At its core, an inverter is a power converter that changes direct current (DC) to alternating current (AC). The batteries in your motorhome store power as DC, which is a problem if you have appliances and electronics that will only run on AC.

Should you leave an RV inverter on all the time?

Typically, it's not necessary to leave an RV inverter on all the time. The inverter does draw some power on its own (even with nothing plugged into it or turned on and drawing power), so you won't generally want to leave it on when it isn't needed to supply power.

What happens if a motorhome inverter is too small?

A Motorhome inverter that's too small just will not handle the load of your appliances, leading to power interruptions or damage to the inverter. On the flip side, an overly large inverter can unnecessarily drain your batteries, as larger inverters consume more power even when idle.
