# EU Energy Storage Plan

Will the European Commission introduce an energy storage package in 2025?

The European Commission says it will introduce an energy storage package in 2025, as outlined in a new report on progress by member states toward 2030 clean energy targets. From ESS News

How does energy storage work in the EU?

The main energy storage method in the EU is by far "pumped storage hydropower", which works by pumping water into reservoirs when there is an electricity surplus in the grid - for example on a sunny or windy day - and releasing it when more energy is needed.

Will Europe reach 100 GW of energy storage?

The EU, UK, Norway, and Switzerland together are expected to reach 100 GW of installed energy storage later this month, according to new analysis launched at the Enlit Europe conference by LCP Delta and Energy Storage Europe. This milestone represents enough capacity to meet the peak electricity demand of Germany and the Netherlands.

How many GW of energy storage will Europe have in 2025?

The EU, UK, Norway, and Switzerland together are expected to reach 100 GW of installed energy storage in November 2025. This milestone represents enough capacity to meet the peak electricity demand of Germany and the Netherlands.
