## **Emission reduction effect of energy storage batteries**

Global cement manufacturing is responsible for about 8% of the world's total CO2 emissions - here are four solutions to cut the carbon from concrete.

The European Union is reintroducing international carbon credits into its climate policy to help meet its 2040 carbon emission targets. The effectiveness of international carbon ...

The maritime industry accounts for 3% of global greenhouse gas emissions. Real-time emissions tracking is key to reduction, compliance, and transparency.

The European Union's (EU) Emission Trading Scheme (ETS) 81 is an example of a market-based GHG emission reduction policy. This type of policy can be classified as a ...

The tracker provides both quantitative and qualitative scorecards for the sectors to continuously track their progress towards, and readiness for, net-zero targets. Furthermore, it ...

Global carbon dioxide emissions from fossil fuels and cement have hit a record high of 36.6 billion tonnes this year, the Global Carbon Project says.

Scope 3 emissions represent the most difficult challenge on the global net zero journey - a World Economic Forum is trying to change that.
