# How long does the 65HA battery inverter last

How long will a 12V battery last with an inverter?

As a simple rule, to calculate how long a 12v deep-cycle battery will last with an inverter multiply battery amp-hours (Ah) by 12 to find watt-hours, and divide by the load watts to find run time hours. Finally, multiply run time hours by 95% to account for inverter losses.

Introduction to Solar Power Battery Inverters - What Do Inverters Do?

How long will a 245Ah battery last with a 1500W inverter?

In this case, a 245Ah battery will last for two hours with a 1500W inverter. The inverter uses 1473 watts an hour. The 95% rated inverter draws less power from the battery, allowing the load to run longer.

How long can a 24V inverter run?

Regardless of the size, the calculation steps are always the same. Using this calculation, a 24V inverter with a 100ah battery and 93% efficiency can run a 500W load for 2.3 hours. You have a 24V inverter with a 150ah deep cycle battery. The inverter is 93% efficient. You want to run a 700 watt load, so how long can the inverter run this?

How long can a 12 volt battery run a 1500 watt inverter?

A 12 volt 50Ah lithium iron phosphate (LiFP04) battery with regular depth of discharge (DoD) of 80% will run a fully-loaded 1500 watt inverter for 13 minutes. The calculation incorporates typical pure sine wave inverter efficiency of 95%.
