
Lithium iron battery station cabinet

Lithium is a lightweight metal used in the cathodes of lithium-ion batteries, which power electric vehicles. The need for lithium has increased significantly due to the growing ...

Lithium-ion batteries are coming under scrutiny after causing a series of fires. The US gets most of its lithium-ion batteries from China, and also sources large volumes from ...

Too many lithium-ion batteries are not recycled, wasting valuable materials that could make electric vehicles more sustainable and affordable. There is strong potential for the ...

Critical minerals like lithium, cobalt and rare earth elements are fundamental to technologies such as electric vehicles, wind turbines and solar panels, making them ...

The shift to electric vehicles and renewable energy means the demand for lithium ion batteries and the metals they are made from is set to increase rapidly. But at what cost?

The main difference is the energy density. You can put more energy into a lithium-Ion battery than lead acid batteries, and they last much longer. That's why lithium-Ion batteries ...

Lithium is one of the key components in electric vehicle (EV) batteries, but global supplies are under strain because of rising EV demand. The world could face lithium ...
