What is a bifacial solar panel?

A bifacial solar panel is a modern solar technology that captures sunlight on both the front and back sides of the panel. While traditional panels absorb light only from one side, bifacial panels take advantage of reflected light from surfaces like rooftops, concrete, or the ground to generate extra power.

Are bifacial solar panels better than monofacial panels?

The technology behind solar panels continues to evolve and improve. Manufacturers are now able to produce bifacial panels, which feature energy-producing solar cells on both sides of the panel. With two faces capable of absorbing sunlight, bifacial solar panels can be more efficient than traditional monofacial panels - if used appropriately.

Which bifacial solar panels are best?

If you're searching for bifacial solar panels for sale that offer high performance and real value, the HQST 100W is a strong contender. It uses advanced bifacial tech to capture sunlight from both sides, giving you up to 15% more energy--making it one of the most efficient 100W portable solar panels available today.

Are bifacial solar panels suitable for rooftop installations?

Bifacial solar panels are not suitable for rooftop installations but may work well with residential ground-mounted solar systems. The ideal use case for bifacial solar panels is in commercial and utility-scale solar installations.
