## Perovskite cell solar glass

Perovskite solar cells (PSCs) have emerged as a viable photovoltaic technology, with significant improvements in power conversion efficiency (PCE) over the past decade. This ...

Metal halide perovskite solar cells are emerging as next-generation photovoltaics, offering an alternative to silicon-based cells. This Primer gives an overview of how to fabricate ...

Perovskite is basically the structure of mineral calcium titanate ( $\text{CaTiO}_3$ ) that was first discovered in 1839 by Gustav Rose who was a Russian scientist and later on named by Count Lev ...

The term perovskite and perovskite structure are often used interchangeably - but while true perovskite (the mineral) is formed of calcium, titanium and oxygen in the form ...

Perovskite materials have emerged as one of the most promising classes of compounds in recent years due to their unique combination of electrical, dielectric, and ...

Perovskites are promising materials for solar cells. A layer of dipolar molecules at the perovskite surface improves the efficiency of these devices.

Therefore, fundamental understanding of perovskite materials including the dynamics and structure of the photogenerated charge carriers is critical for the future viability ...
