# Price of emergency inverter

What is an emergency inverter system?

Inverter systems are made up of a set of DC batteries and electronics that can convert the DC power from the batteries into an AC power source needed for the emergency lighting loads.

Emergency inverter systems will provide enough emergency AC power for the required time to exit the building if necessary.

What is an emergency lighting inverter?

Emergency lighting inverters are an excellent choice for use with multiple fixtures and in cases where emergency LED drivers cannot be used, such as with integral-base lamps. Major benefit of emergency inverters is that they offer the advantage of long-distance remote installation. Here's how an emergency lighting inverter typically works:

What is an emergency lighting backup inverter?

An emergency lighting backup inverter is a device that converts DC battery power to standard AC voltage to provide backup for various lighting systems, including fluorescent and LED lights, in an emergency.

What is a lighting inverter?

A lighting inverter is a device that converts DC battery power to standard AC voltage to provide backup for lighting systems in an emergency. It can also help protect against "brownouts" or other voltage drops. What is an emergency lighting inverter? It provides power to your emergency lamps and fixtures in a power loss.
