What is the operating temperature of a supercapacitor?

The operating temperature of a supercapacitor can vary depending on the manufacturer and model. However, most supercapacitors are designed to function within a temperature range of (-40 to 85)°C or (-40 to 185)°F. This temperature range is commonly referred to as the "standard" or "commercial" range.

Are supercapacitors safe at high temperatures?

Supercapacitors (SCs) incorporating solid-state electrolytes, including (quasi)-solid-state electrolytes, are generally favored for operation at elevated temperatures due to safety considerations [,,]. These electrolytes mitigate risks associated with leakage, flammability, and corrosion.
