# Solar Sunshine Glass Room

What are the most common solar rooms?

Greenhouses are the most common solar rooms. Conventional greenhouses, however, are not designed to take maximum advantage of the sun's energy. The problem is that most are built with a single layer of glass, and so they lose more heat at night than they gain from the sun during the day.

Where should a solar room be located?

If an east-facing solar room seems to be a good solution to either site or building problems, locate spaces such as kitchens on the east side of the house next to or behind the solar room to take advantage of the morning light and heat.

How sloping should a solar room be?

Glazing for solar rooms should be vertical or sloped no more than 30° from vertical (at least 60° from horizontal). Before you build, however, talk to everyone you can find who has ever used glass in a sloping position, and ask about leaks.

How much heat does a solar room provide?

Most of the information in this chapter is applicable for relatively small solar rooms of 100 to 200 square feet. Unless your house is super insulated or in a mild climate, a solar room of this size will provide less than 25 percent of your heat. For big leaky houses, small solar rooms will provide as little as 5 or 10 percent of the heat.

Modern Glass Houses Sunshine Glass Room Outdoor Garden Sunroom Free Standing Solar Panel Green Houses, Find Details and Price about Solar Panel Green House ...

WHB& R Solar sunshine room is a combination of lighting, insulation, sound insulation, beauty, environmental protection, power generation and other functions in one of the building form. WHB& R Solar sunshine room has ...
